

making a fallout zine

easier than you think!

When mass-printing,
shifting slightly can leave white borders.

Bleed adds extra space so cutting errors don't show!

Red Zone: Bleed margins, will be cut off

Red Dotted Line: Cut lines, where paper is cut

Blue Zone Line: Safe zone, keep all important
info within here!

**Please fill up the zones / dotted
lines with colors & images**

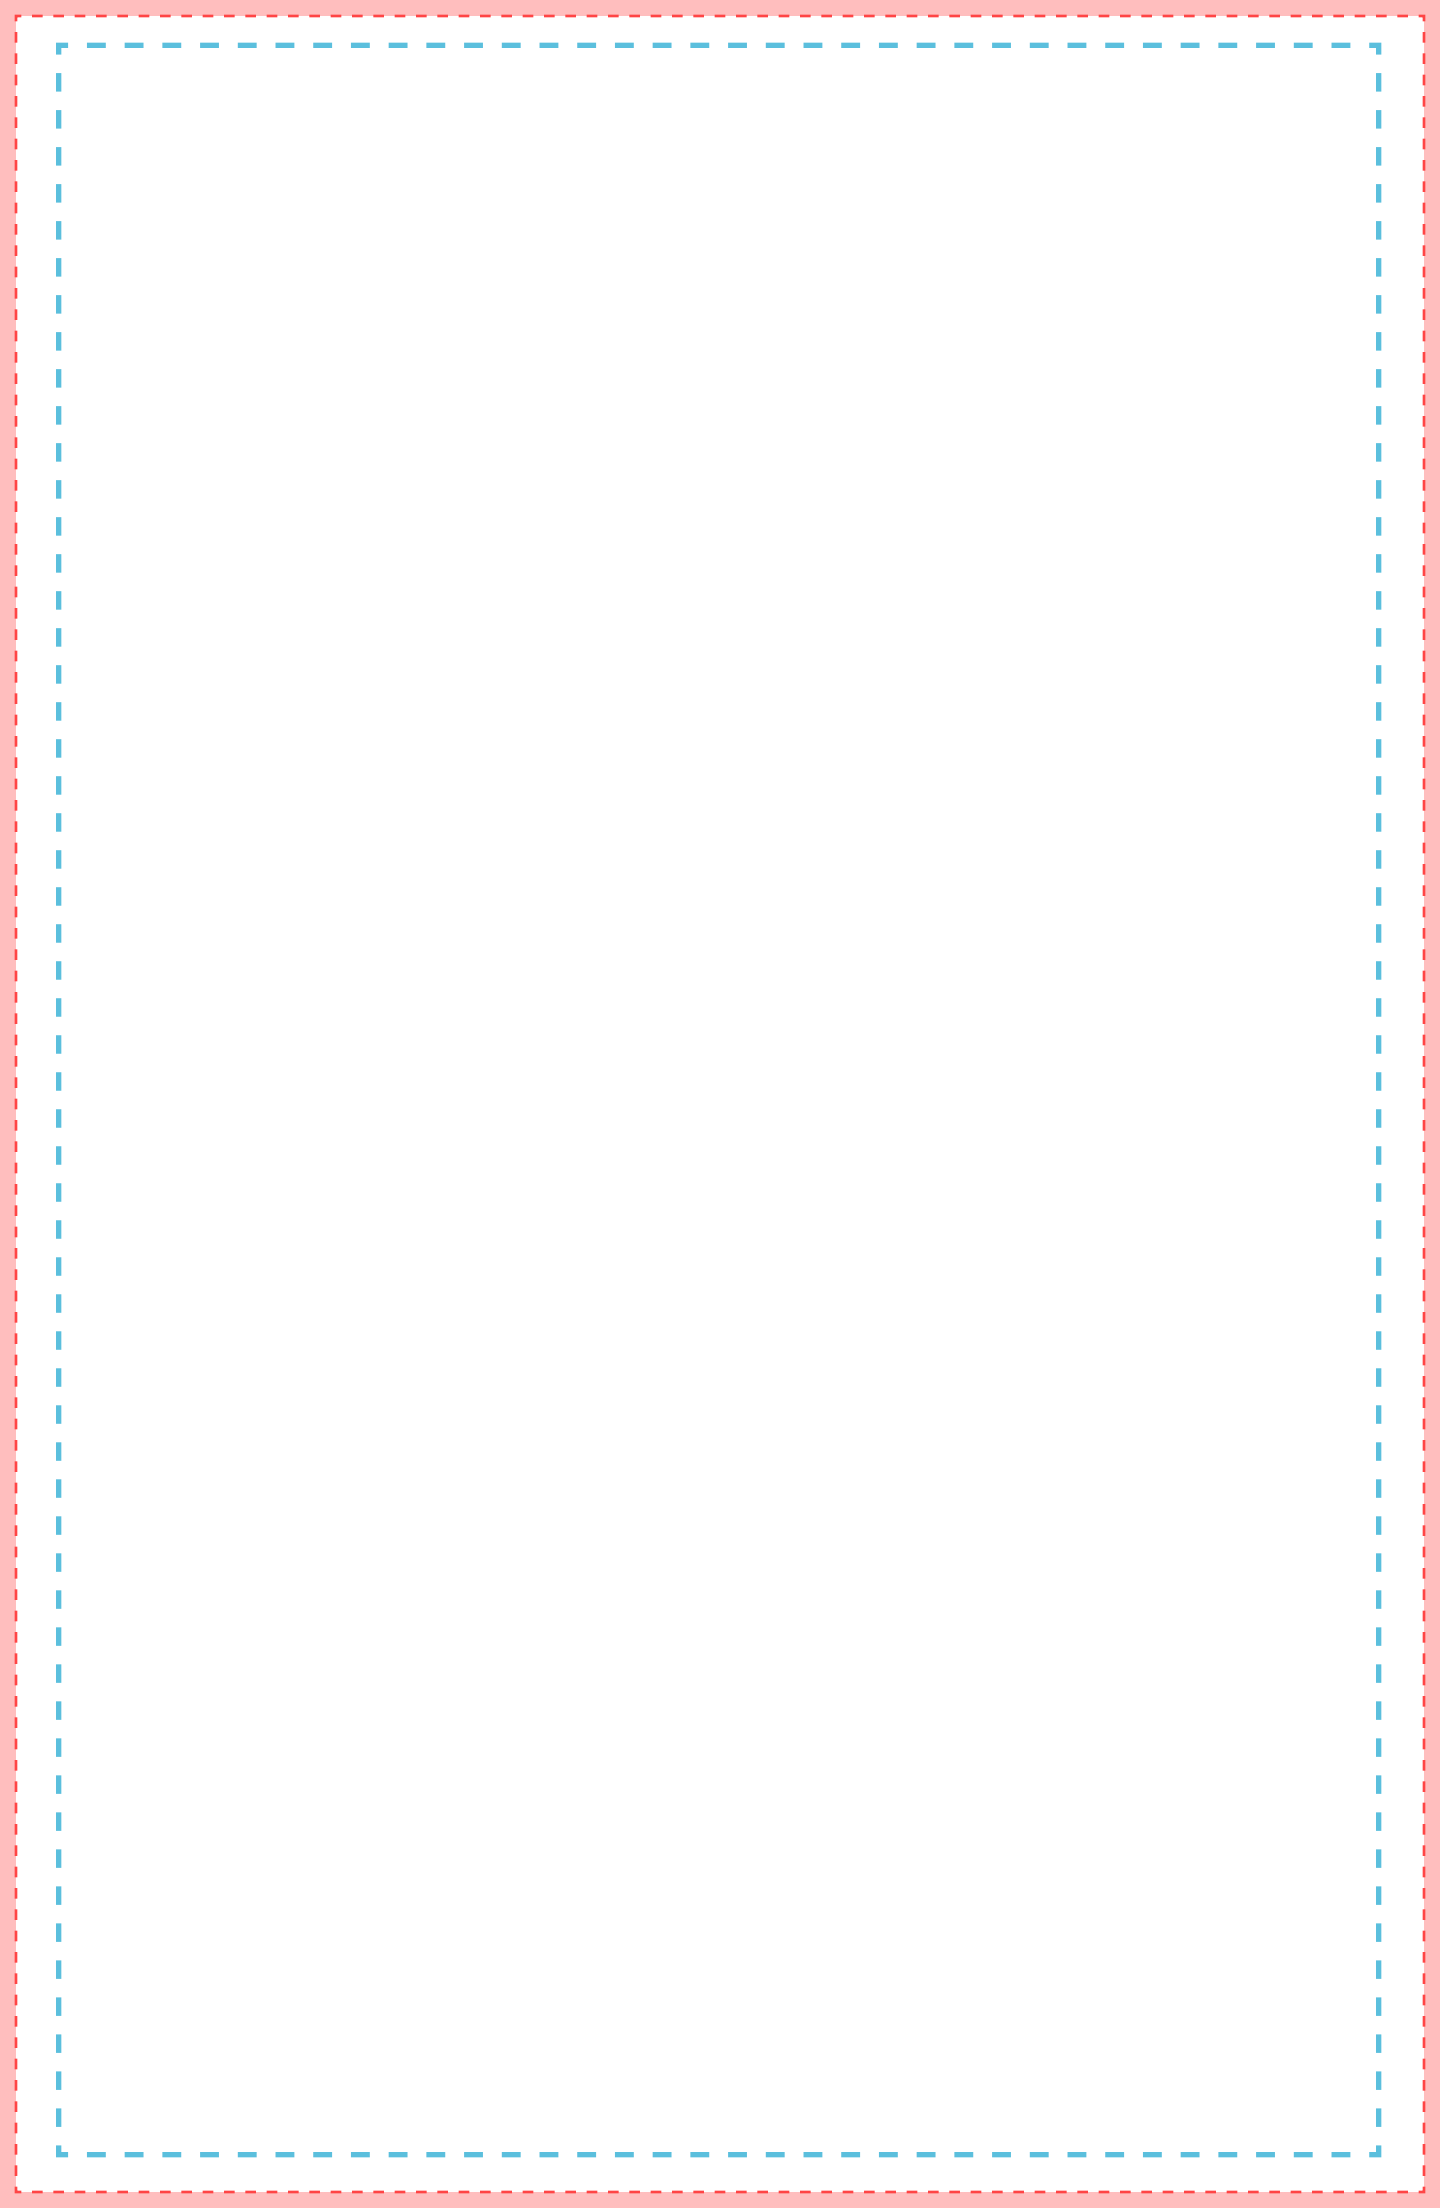

No important text should be there

This is the size of the zine page!

Please include:

- Project Name
- A brief description of your project
- A central graphic of your project
- A QR Code to your project
- Your name/slack, age, and country (if you're uncomfortable with this, please let us know!)

**Take a screenshot
of the next page**

PAST ZINE PAGES!

THE BIBLICALLY ACCURATE KEYBOARD

A keyboard... in the form of a biblically accurate angel!

- 30 keys, all in massive rings of custom keycaps and switches!
- powered with QMK!
- can make you feel the unyielding, burning gaze of [redacted]
- their name is bobby D

(by alex tran! a 15 y/o from florida)

is it practical? no
but it looks cool! 13%

scan here to get it!

mini maimai

BY TONGYU (19, SG) @ UNDERCITY

A TINY RHYTHM GAME CONSOLE

minimaimai is inspired by the arcade rhythm game maimai. It uses an orpheus pico, a 1.28in tft, 8 buttons, a speaker, and lots of hot glue.

(i love rhythm games :)

JUKEBOX

A functional Minecraft Jukebox!
Made by Daniel Davidson, 16, USA

Jukebox uses a Raspberry Pi Zero 2 with an RC522 NFC scanner to detect when you've put in a disc and play music!

Check it out here!

Not approved by or associated with Mojang/Microsoft. Obviously.

TWOSWAP

made by Nick (17, USA) for Hackaday Supercan 9

TWOSWAP is a TV-head and your new best friend.

He's also my first interactive hardware project. I had lots of roadblocks, but being able to interact with others while publicly presenting as him was worth it!

- runs pygame for custom facial expressions
- powered by a pi-5 (died) RPI0 2w.
- entirely handsewn bandana and arm/kneepads, which contain an LED perfboard powered by 2x CR2032s

mandatory aura farming. thank you nirav!

GUTS: bike helmet, power bank, led board, hdmi, I/O detector, led screen

CircuitCrafter Mini

A compact, high-precision portable PCB milling machine.

With a rigid aluminum frame, NEMA 17 motors, and leadscrews, it offers reliable precision. 3D printed parts keep it customizable and low-cost. It also handles light materials, making it a versatile prototyping tool.

Nema 17 Stepper Motor
8mm Lead Screw
775 12v Spindle
ER11 Collet Chuck
Copper Clad and Clamp System
2040 Aluminum Extrusion

MGN9H Linear Guide
Limit Switches
MGN12H Linear Guide

Check it out here!

Made by Akhil Pathapati (17, USA)
Bonus: This fits on a standard 3D Printer Build Plate. Things really are bigger in CAD LOL

DIODE LASER CUTTER

By Pegoku (Pere) 16 y.o. from Menorca

10W 450nm LASER
Capable of speeds of +15000mm/min
Can cut up to 20mm Plywood 1 pass!

FluidNC Web UI
Capable of 2D cutting and 3D engraving!

Vuk, 16

OLED

Glasses that listen to your conversations and feeds you jargon to say.

Top 10 @ Undercity
Made during a sleep deprived weekend in San Francisco.

make it expressive.

stm32pe midi controller
by danny (17, U.S.)

- two full octaves
- extra key on the left
- on the stm32 platform
- usb-c on the go device
- pwm led on each key
- built in 52 hrs

a midi keyboard that uses the mpe midi protocol. it allows the creation of more expressive music using per key pitch change with full velocity input sensing.

screen shot is from the abelian demo project. check outton - patience
